Bijay Kumar Chaudhary

Software Engineer

USA | bijaykumar@myjobstech.com | +1 (314) 396-2634 | LinkedIn

SUMMARY:

Software Engineer with 3+ years of experience building scalable Java and Spring Boot applications across healthcare and financial services. Experienced in developing microservices, REST APIs, Kafka-based event processing, AWS cloud deployments and AI/ML-integrated workflows, including RAG-powered GenAI solutions for healthcare operations. Strong background in API performance optimization, secure data processing, CI/CD automation and enterprise application reliability, with hands-on experience supporting high-volume transactions and regulated data environments.

TECHNICAL SKILLS:

Languages: Java 17/21, Python, SQL, JavaScript, TypeScript, Bas h
Backend & Architecture: Spring Boot, Spring MVC, Spring Cloud, Spring Security, JPA, Hibernate, Microservices, REST, SOAP, API Design, Distributed Systems
AI/GenAI: LLMs, RAG, LangChain, LangGraph, LlamaIndex, Prompt Engineering, AI Agents, Azure OpenAI, Amazon Bedrock, Hugging Face, FAISS, Pinecone, MLflow, NLP
Cloud: AWS, Azure, EC2, ECS, EKS, Lambda, S3, RDS, API Gateway, SQS, SNS, EventBridge, Azure Functions, AKS, Azure OpenAI, Key Vault
Messaging & Streaming: Apache Kafka, Kafka Streams, RabbitMQ, SQS, SNS, EventBridge
Databases: Oracle, PostgreSQL, MySQL, SQL Server, MongoDB, DynamoDB, Redis, Elasticsearch, Snowflake
Healthcare & Financial: HL7, FHIR, SMART on FHIR, EHR/EMR, PBM, Claims, Eligibility, Prior Authorization, PHI/ePHI, HIPAA, HITECH, CMS, Payments, Banking, Fraud Detection, Risk Analytics, KYC, AML, CDD, PCI DSS, SOX, RBI
DevOps & CI/CD: Docker, Kubernetes, Helm, Jenkins, GitHub Actions, Azure DevOps, Terraform, Ansible, Maven, Gradle
Testing & Quality: JUnit 5, Mockito, TestNG, REST Assured, Postman, Selenium, Cucumber, TDD, Integration Testing
Monitoring & Observability: Splunk, ELK, Prometheus, Grafana, CloudWatch, Azure Monitor, OpenTelemetry
Data Engineering: Apache Spark, PySpark, Databricks, Airflow, ETL/ELT, Data Lakes, Data Warehousing
Security: OAuth 2.0, OpenID Connect, JWT, RBAC, IAM, TLS/SSL, Encryption, KMS, Secrets Management
Tools & Practices: Git, GitHub, Jira, Confluence, Agile/Scrum, CI/CD, SDLC, System Design, Design Patterns, Performance Tuning, Production Support

WORK EXPERIENCE:

Centene Corporation, USA | Software Engineer **Aug 2025 - Present**

- Built RAG-powered GenAI workflows for claims explanation, member inquiries and case summarization using enterprise LLMs, LangChain and vector search, reducing manual information lookup by 30%.
- Designed grounded retrieval pipelines combining claims, eligibility and approved healthcare knowledge sources, improving answer relevance from 82% to 94% through metadata filtering and prompt engineering.
- Engineered Java 17/Spring Boot microservices for claims, eligibility, benefits and prior authorization workflows, processing 1M+ transactions/month with 99.9%+ service availability.
- Automated real-time healthcare event processing with Kafka and AWS Lambda, using retries, idempotency and dead-letter handling to improve reliability across claims and member-service workflows.
- Reduced API p95 latency from 810ms to 605ms by optimizing SQL queries, service calls and payload processing across member-facing and internal healthcare applications.
- Accelerated AWS deployments from 25 minutes to 12 minutes by streamlining ECS/EKS release workflows with Terraform, Docker and CI/CD, enabling consistent production releases with minimal service disruption.
- Hardened PHI/ePHI workflows with Spring Security, OAuth 2.0/JWT, RBAC, encryption, audit logging in alignment with HIPAA requirements.
- Integrated AI-assisted case workflows with human validation, applying access controls, output checks and auditability to support responsible GenAI use in sensitive healthcare operations.

Mphasis, India | Software Engineer **May 2022 – July 2024**

- Developed Java 8/11 and Spring Boot microservices and REST APIs supporting customer onboarding, account servicing, transaction processing and analytics workflows, handling 500K+ events daily across enterprise financial applications.
- Built Kafka-based event processing for customer and transaction data, enabling reliable asynchronous communication between services and improving processing throughput by ~25% during peak workloads.
- Integrated AI/ML scoring services with Java applications through REST APIs, passing validated customer and transaction data to model endpoints for customer segmentation and propensity scoring and returning results to downstream workflows.
- Improved p95 API response time by ~22% by optimizing JPA/Hibernate queries, SQL indexing, connection pooling and targeted caching across high-volume customer services.
- Secured customer and financial data using Spring Security, OAuth 2.0/JWT, RBAC and audit logging, while incorporating KYC, AML, CDD, sanctions screening and PCI DSS requirements into application workflows.
- Containerized and deployed Spring Boot services on AWS ECS, supporting cloud-based application hosting, data persistence, event processing and production monitoring.
- Developed automated tests with JUnit and Mockito and supported Jenkins CI/CD pipelines, strengthening regression coverage and release quality through code reviews and controlled deployments.
- Monitored production services through AWS CloudWatch and application logs, resolving transaction failures, API latency and integration issues while maintaining 99.9%+ service availability.

EDUCATION:

Master of Science in Computer Science - Saint Louis University**, Missouri, USA**
Bachelor of Engineering in Computer Science & Engineering - Sona College of Technology, Anna University**, India**
